DETAILED ACTION

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 1, 6, 7 are rejected under 35 U.S.C. 103(a) as being unpatentable over US 5041448.

See example 22, compounds 41 and compound 43, and example 36, compound 139. These are species excluded by proviso from claim 1, corresponding to R4 as amino or methyl substituted by 4-piperidinyl, with a methyl substituent on the piperidine N for compound 139. However, the claim still covers the compounds where there is a methyl group on the carbon of the piperidine ring, since such compounds, with a methyl group on the carbon of the piperidine ring are not excluded by proviso, and hence are obvious. Such compounds are taught by the reference, as R2 can be H or methyl, and compounds with R2 as methyl are seen as #65, and #101.

The traverse is unpersuasive. Applicants do not seem to accept that purinone and purinol are tautomers, saying, "there is no basis to assert that they are tautomers of applicants' purinones." Applicants have presented no reasons for such a position, and the examiner does not understand why applicants do not consider enol and keto forms as tautomers, as this is basic organic chemistry. At any rate, to rebut this argument, two

Art Unit: 1624

references are cited as evidence that one of ordinary skill in the art understands that these are tautomers. In 6028076, see column 24, where IV and V are called tautomers. In 5863921, note column 3, first paragraph, which states, "compounds described by formula (I) where the 6-oxo (also known as the 6-hydroxy tautomer..."

The other argument is that Compounds 65 and 101 have other structural differences. This is true; otherwise they would themselves anticipate. These are not the species which render the claims obvious. These are simply examples of compounds with an extra methyl on the piperidine ring,

Attention is drawn to 20040116328, cited previously. This publication has species falling within the instant claims, see e.g. table starting on page 16, when Z1 is N and Z2 is CR2. This document does not appear to be prior art against these claims, as the translation of the provisional application appears to support the instant claims.

Claims 2-5, 9-20 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

THIS ACTION IS MADE FINAL. Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire **THREE MONTHS** from the mailing date of this action. In the event a first reply is filed within **TWO MONTHS** of the mailing date of this final action and the advisory action is not mailed until after the end of the **THREE-MONTH** shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action.

Art Unit: 1624

In no event, however, will the statutory period for reply expire later than SIX MONTHS from the mailing date of this final action.
